DETERGENCY TECHNOLOGY:

The Avant Technology line is the result of nanotechnology applied to Detergents that will revolutionise the world of professional cleaning. Thanks to nanotechnology the Avant Technology line requires a lesser amount of active ingredient in the solution, thus increasing environment friendliness.

The Avant Technology product, once activated reaches and many times exceeds the performance of normal concentrates. The Avant Technology plants produce a complete range of high performing products able to satisfy the most specific requirements of each individual professional user, in every sector and/or field of application.

RATIONALISATION OF STOCKS:

Have an entire warehouse of detergent and sanitising products always available, condensed into less than 1 square meter of space, this is the challenge that Avant Technology has won by responding to the more demanding customer requests.

COMFORTABLE AND FAST:

It is easy because any operator may use it such as automatic distributors (for example coffee/drinks), is practical and immediate. The "Coral" delivery system and Avant Technology vials are user and environmentally friendly because they allow you to carry out production operations of the detergent in absolute safety, ensuring a fast and great performance.

ECONOMIC:

All Avant Technology formulations comply with the portfolio as well as the environment. The dilutions of use allow the drastic reduction in normal running costs arriving at the maximum price of €1/litre by creating a small treasure that you can use for different choices.

IT IS ECOLOGICAL:

Since the number of vials, carton stopper labels and packaging (which are usually discarded after use) are reduced by 95 %. Since it drastically reduces gas emissions from transport, by production and non-renewable energy sources helping to save the planet.

WORLDWIDE FEATURES:

Ecogenia distributes exclusively worldwide the Avant Technology line. The incredible performances achieved in the field are link our formulas to previously unknown levels on the market in terms of yield per square meter, for wetting power, saponification and loosening action of dirt and enhancing greatly the traditional performance.

The evolution of detergency without limits
